

GYMSYS is a complete data management solution developed specifically for Fitness establishments that need to maintain various levels of membership information

Specific Features of the system include:

- **Ability to track total number of members, including membership status, individual fitness goals, payment information and individual special instructions, such as dietary needs and existing medical conditions.**
- **Bar code enabled to ensure accurate logging of member sign-ins. Membership cards are scanned at sign-in allowing for various qualitative analyses of individual usage patterns.**
- **Generate membership cards with barcode data.**
- **Track client fitness goals and monitor client performance towards achieving them**
- **Allows the creation of personalized workout schedules tailored to each client fitness goals**
- **The system automatically identifies expired memberships and generates renewal letters.**
- **Ability to generate various generic reports. Also includes user-definable parameters for generating custom reports**
- **Ability to track Revenue and Expenses and generate financial reports**
