

*Monitoring and Evaluation (M&E) of development activities provides a better way for government officials, development managers, and civil society to learn from past experience, thereby improving service delivery, planning and allocation of resources, and demonstrating results as part of accountability to key stakeholders*

M & E Solutions

Data Management Solutions for Monitoring & Evaluation

***AI Solutions (AIS) develops systems that vastly simplify the process of data collection and reporting for Monitoring and Evaluation***

### ***The Electronic Logframe Matrix (ELM)***

is an easy-to-use tool developed by AIS that simplifies the process of generating logframes. The ELM is made up of four modules; **Goals, Purpose, Activities** and **Outputs**, and each module features a screen that asks users

- ▶ What is the project going to achieve?
- ▶ What activities will be carried out to achieve its outputs and purpose?
- ▶ What resources (inputs) are required?
- ▶ Which indicators will be used?
- ▶ Are indicators verifiable?
- ▶ How do we verify?
- ▶ What are the potential problems which could affect the success of the project?

By tracking and documenting user responses, the ELM serves as an indispensable tool in the project design process, planning and management. The ELM runs as standalone software and can also be hosted on a server and accessed through a Web browser thereby facilitating collaboration among groups and across teams.
