

A solution developed for the Nigerian Electricity Regulatory Commission (NERC) for the collection and management of performance data. The system also includes tools for data analysis, and reporting.

Specific features of the system include

- Simple and intuitive user interface
- Tracks Key Performance Indicators for electricity generation and transmission stations including distribution and marketing.
- Map of the National Electricity Transmission Grid

- Geographic Information System (GIS) capabilities for generating accurate energy grid maps (HVAC/HVDC transmission maps) including state and regional in-depth energy reports.
- Efficient, real-time data entry and retrieval from remote locations via cell phone enabled handheld device, fixed-line telephone and a secure web site.
- Customizable easy-to-read graphical reports of "National Energy Generation Performance Assessment", "Key Performance Indicators" for generating stations and "Ranking of Generation Stations"
